

Please replace the paragraph beginning at page 24, line 6 with the following amended paragraph:

By comparing the k values of Example 11 (~~0.99~~0.26), with those of Examples 1-4 (k values ranging from 0.05 to 0.13) it can be seen that the method of incorporation of the silver releasing compound influences the k value. This can also be seen by comparing the k values of Example 14 (2.0) with that of Examples 6-9 (~~0.89-0.99~~0.12-0.20). In both instances compounding the silver releasing compound into the lens formulation provided lower k values.
